

Room Playtest Launcher

Short guide for Rafal and Pawel

What It Offers

Play This Room launches the active Designer Room scene directly into Game_Windows as a temporary no-save playtest. It builds runtime room data from the scene markers and auto-spawns the player, selected loadout id, enemies, doors, hazards, rocks, holes, interactives, lighting, camera, and combat systems.

How To Use It

1	Open a scene in Assets/_Hollow/Scenes/DesignerRooms/.
2	Open Hollow > Designer Rooms > Room Authoring.
3	Go to Visual Preview, pick a loadout, then click Play This Room.
4	Test the room in Play Mode. Stop Play Mode to return to the Designer Room scene.

Good Room Checks

Player starts safely. Doors align. Enemies wake, path, and attack correctly. Rocks, holes, and hazards affect movement. Room clear and rewards still feel fair.

Important Notes

The launcher blocks invalid rooms and reports validation errors. Unsaved edits must be saved before Unity switches to the runtime scene. The playtest uses transient room-designer mode, so it does not write run progress.

Menu shortcut: Hollow > Designer Rooms > Play This Room
