

Hollow Soul

M38 ArtPass Integration Sprint
Rafal Handoff + Programming Integration

Purpose

This package turns generated ArtPass placeholders into a precise production handoff. Programming keeps the pipeline stable, while Rafal can replace generated AP_* wrappers with real low-poly dark toy-diorama models, materials, textures, VFX, and basic animation ingredients. Nothing here makes art authoritative for gameplay.

Implemented in M38

Added a 37-target ArtPass catalog, Rafal intake folders, new presentation roles for shop cards/equipment/items, generated placeholder prefabs for those roles, runtime visual hooks for shop cards and portals, validation/tests, and this PDF.

What Still Needs Rafal

Final silhouettes, texture/material mood, VFX timing, basic animation poses, and asset polish. The most valuable output is a small set of critical replacements that improve readability immediately: player, normal enemy, boss, floor, rock, door states, reward, boss key, shop card, and portal.

Folder And Naming Rules

Purpose	Path	Rule
Raw Rafal intake	Assets/_Hollow/Art/Intake/Rafal/M38///	Drop Blender, FBX, PNG, PSD, notes, references here.
Runtime prefab wrappers	Assets/_Hollow/Prefabs/ArtPass/	Use AP_.prefab or VFX_.prefab.
Runtime materials	Assets/_Hollow/Art/Materials/ArtPass/	Use simple URP/Linear-safe materials.
Models	Assets/_Hollow/Art/Models/Rafal/M38/	Normalized model sources after cleanup.
Textures	Assets/_Hollow/Art/Textures/Rafal/M38/	Low-res/readable textures; avoid expensive stacks for now.
Target catalog	Assets/_Hollow/Data/ArtPass/M38/ArtPassTargetCatalog_M38.asset	Source of target goals and acceptance checks.

Acceptance Rules For Every Runtime Visual

- Prefab root has PresentationVisualMarker with the matching role.
- No gameplay colliders and no gameplay scripts on visual children.
- Pivot/origin is centered; floor objects and doors use bottom at y=0 where applicable.
- Readable from Windows 3D camera and Vision Pro bounded tabletop scale 0.1.
- Low hierarchy count, simple materials, no expensive shaders, no remote Addressables.
- Art is visual-only: collision, traversal, damage, rewards, saves, and room semantics remain code/data driven.

Critical Runtime Targets

These are the first targets Rafal should attack. If only a small number of assets can land tomorrow, prioritize from the top of this table.

Group	Asset	Role	Goal	Scale
Characters	Player Body	Player	Readable one-piece hero silhouette with subtle soul glow.	0.45m wide; 1.1m tall
Enemies	Enemy Normal	EnemyNormal	Small corrupted toy/soul chaser silhouette.	0.55m wide; 0.65m tall
Boss	Boss Stone Warden	EnemyBoss	Large guardian silhouette with readable charge/burst telegraph surfaces.	1.2m wide; 1.4m tall
Rooms	Room Floor Tile	RoomFloor	Dark toy-diorama floor module readable under grid/lighting.	1m x 1m top; 0.08m thick
Rooms	Rock Obstacle	RoomObstacleRock	1m gameplay blocker visual; bottom sits exactly at y=0.	1m x 1m footprint; 1m tall
Doors	Door Active	DoorActive	Open/usable branch door state.	Fits 1m lane; bottom y=0
Doors	Door Locked	DoorLocked	Clearly locked boss-key door state.	Fits 1m lane; bottom y=0
Doors	Door Cleared	DoorCleared	Cleared/unlocked door state with calm green read.	Fits 1m lane; bottom y=0
Combat FX	Player Projectile	Projectile	Readable projectile core, not confused with enemy shots.	0.25m diameter
Combat FX	Enemy Projectile	EnemyProjectile	Danger-colored projectile core with readable ownership.	0.25m diameter
Rewards	Reward Pickup	RewardPickup	Generic pickup that reads as valuable from top-down and perspective.	0.45m diameter
Rewards	Boss Key Pickup	BossKeyPickup	Distinct key reward; must not look like a normal pickup.	0.5m wide; 0.6m tall
Hub	Hub Shop Stand	HubShop	Compact shop stand readable beside card offers.	1m wide; 0.8m tall
Hub	Hub Shop Card	HubShopCard	Reusable visible offer card frame behind generated text.	1m wide; 0.7m tall
Hub	Branch Portal	NextBranchPortal	Open branch portal, readable from hub camera.	0.8m diameter
Hub	Next World Portal	HubReturnPortal	Fourth right-side deeper-world/final-extraction portal.	0.95m diameter

High Priority Targets

These create content variety and make the game feel less placeholder-heavy after the critical set is underway.

Group	Asset	Role	Goal
Enemies	Enemy Flying	EnemyFlying	Hovering enemy with obvious flying read and no floor contact.
Enemies	Enemy Fast	EnemyFast	Lean fast enemy silhouette with strong motion/readability.
Enemies	Enemy Heavy	EnemyHeavy	Chunky heavy enemy silhouette with slow/tanky read.
Enemies	Enemy Charger	EnemyCharger	Forward-leaning charger with visible windup direction.
Enemies	Enemy Turret	EnemyTurret	Stationary ranged enemy with readable eye/barrel direction.
Enemies	Enemy Splitter	EnemySplitter	Enemy that visually suggests splitting/fragility.
Doors	Door Unavailable	DoorUnavailable	Dim blocked/unconnected door state.
Doors	Secret Door Debug	SecretDoorDebug	Visible prototype secret/debug door state.
Equipment	Melee Weapon Pickup	WeaponMelee	Generic visual wrapper for swords/blades.
Equipment	Ranged Weapon Pickup	WeaponRanged	Generic visual wrapper for bows/bolts.
Equipment	Armor Pickup	Armor	Generic armor/suit pickup wrapper.
Items	Active Item Pickup	ActiveItemPickup	Active item pickup shell for charms/totems.
Items	Consumable Card Pickup	ConsumableCardPickup	Consumable card visual shell.

VFX Targets

Group	VFX Role	Goal
VFX	VfxProjectileFire	Small muzzle/projectile birth flash.
VFX	VfxEnemyHit	Short enemy impact flash.
VFX	VfxEnemyDeath	Tiny burst/death pop.
VFX	VfxPlayerHit	Player damage flash.
VFX	VfxRewardClaim	Reward sparkle/claim pop.
VFX	VfxDoorUnlock	Door unlock flash.
VFX	VfxRoomClear	Room clear pulse.
VFX	VfxPortalComplete	Portal completion pulse.

Tomorrow Target Goals

Minimum useful output from Rafal: 5 runtime-ready prefab wrappers replacing generated placeholders. Ideal output: 10 to 12 visible replacements plus one VFX pass. Excellent output: all critical hub/combat readability assets replaced, even if rough.

Track	Minimum	Ideal	Excellent
Rafal art	Player, normal enemy, rock, floor, portal.	Add boss, shop card, reward, boss key, active/locked doors.	All critical targets plus one VFX family.
Martin integration	Swap prefabs into catalog, validate no collider takeover.	Add screenshots, run M38/M24 gate, tune scale/pivots.	Lock updated vertical slice screenshots and prepare next polish issues.
Shared review	10 minute playthrough with notes.	Compare Windows and Vision Pro bounded readability.	Choose art direction decisions for M39 story/world identity.

Known Limits

- No final external production art exists yet, so generated placeholders remain safe fallback.
- No animation controller pipeline is added in M38. Basic animation clips can be added later as visual-only children.
- No per-weapon unique art binding is implemented yet. M38 provides generic weapon/armor/item pickup roles first.
- No gameplay logic should be moved into prefabs during art replacement.

Verification Commands

Unity menu: Hollow/Generation/Generate Milestone 38 Assets. Then: Hollow/Validation/Run Milestone 38 Validation. Full project gate remains Hollow/Platform QA/Run Full M24 QA.
